

Schilke Mouthpiece Comparison Reference Chart

We have had many requests for a chart showing how our rim diameters compare with those of other manufacturers. Please keep in mind that this comparison is for *inner rim diameter only*. It does not take the resistance variables of the mouthpiece in to account. (throat, cup volume, backbore, ect.)

Listed below are a selection of our most popular mouthpieces and their equivalent counterparts from other manufactures. This list is by no means the definitive answer in mouthpiece comparison. Its sole purpose is to show the range of our standard mouthpiece line and to assist in the selection of the proper Schilke mouthpiece.

TRUMPET/CORNET
